

Three reasons why

The fact is, most IT companies & their cloud solutions are all the same. They look after your apps/data, respond to your calls & react to your problems. Cloud30 is very different. You won't have come across anything like it before. Cloud30 is a unique cloud computing solution specifically designed for ambitious owner-managed small businesses.

The three reasons why you should choose Cloud30 ...

1. Your IT will cost you less & you'll never incur any surprise costs because you won't need to buy a server or a backup system. Cloud30 is a fully serviced, per user, monthly fee. Most IT companies try to upsell stuff with questionable benefits – we don't, we give you what you need.
2. You'll make faster progress than your competitors because by default your IT systems are up-to-date, you are using the latest technology, all your staff will be on the same easy to use system & all your information is shared/optimised & sync'ed the way you want it. Most IT companies can't/don't offer such straight forward IT.
3. You'll sleep better because you'll know your data is safe even if a disaster like flood or fire occurs or a computer is stolen. Most IT companies can't give you this level of comfort.

If you run a small to medium sized company & would like to consider cloud computing you need to be talking to us.
